Career Objective

Computer Science graduate with a passion for backend systems, algorithms, and clean scalable APIs. Excels at designing efficient software architectures and solving real-world problems with code. Aiming to join a growth-driven team as a Backend Engineer.

Education

B.Tech in Computer Science and Systems Engineering Jun 2025	<i>Kalinga Institute of Industrial Technology</i> CGPA: 8.04
Senior Secondary (10+2, PCM) Jun 2021	<i>Lady Anusuya Singhania Educational Academy</i> 66.2%

Skills

C C++ Java Python Spring Node.js .NET SQL Flask Git Android Studio DS & A
Problem Solving Teamwork Time Management Communication Accountability Resilience

Projects

Action Detection for Sign Language Developed a real-time gesture recognition system using MediaPipe and LSTM. Enabled sign translation via hand keypoint tracking and sequence modeling.	<i>Python, OpenCV, MediaPipe, LSTM</i>
Path Finding Visualizer Visual tool demonstrating BFS, DFS, A*, Dijkstra with animated maze generation. Emphasized clarity of search path and performance in grid traversal.	<i>Python, Pygame</i>
Elevator System Design Designed core elevator logic for handling requests and movement optimization using queue-based state tracking and class-based modular structure.	<i>Java, OOP</i>
Attendance Management System A student attendance system with hotspot-based private network, device MAC address verification, secure web login, and real-time attendance tracking. Includes backend REST APIs and report generation using MySQL.	<i>Java, Spring Boot, MySQL</i>

Experience

Product Intern — YHills (Virtual) Worked on low-level system component design for internal tools. Focused on code clarity, reusability, and backend optimizations for performance.	<i>Apr–May 2024</i>
