SUMMARY

Software Engineer specializing in secure backend architecture and applied machine learning. Combines expertise in Java, Spring Boot, and MySQL to build robust, highly optimized REST APIs and relational databases. Strong proficiency in Python for developing and deploying real-time deep learning models, with a proven ability to translate complex algorithms into scalable, production-ready infrastructure.

WORK EXPERIENCE

AI Instructor | Kathmandu Model College (KMC) Nov 2025 – May 2026

- Delivering specialized curriculum in AI and Machine Learning to students, bridging the gap between theoretical math and practical Python implementation.
- Mentoring students on building neural networks and NLP models through hands-on lab sessions.

IT & Web Operations Associate | DN Production House Pvt. Ltd. Nov 2025 – Feb 2026

- Designed and developed company websites and web applications from scratch, ensuring high performance and SEO optimization.
- Managed cloud hosting, server environments, and REST API integrations to support business operations.
- Acted as the primary technical lead for troubleshooting, security updates, and database management.

Product Intern (Virtual) | YHills Apr 2024 – May 2024

- Assisted in designing low-level system components and optimizing backend performance for internal tools.

TECHNICAL SKILLS

- **Programming:** Java (Spring Boot), Python (AI/ML), C++, C, SQL, Dart (Flutter).
- **Web & IT:** Server Management, Web Hosting, SEO, REST APIs, WordPress, HTML/CSS.
- **Core CS:** OOP, DBMS, Data Structures & Algorithms, Logic Circuit Design.

EDUCATION

B.Tech in Computer Science and Systems Engineering Graduated: June 2025
Kalinga Institute of Industrial Technology (KIIT), India

PROJECTS

Attendance Management System | Java, Spring Boot, MySQL, REST APIs

- Built a secure attendance system using Spring Boot REST APIs and MySQL.
- Implemented device-based verification using MAC address tracking to prevent duplicate or unauthorized attendance marking.
- Deployed a private network-based workflow using hotspot connectivity for controlled classroom environments.

Action Detection for Sign Language | Python, OpenCV, MediaPipe, LSTM

- Developed a real-time sign language recognition system using computer vision and deep learning.
- Extracted hand landmarks using MediaPipe and trained an LSTM model for sequential gesture classification.
- Achieved real-time inference for converting hand movements into textual output.

Elevator System Design | Java, Object-Oriented Programming

- Designed a simulation of an elevator control system using OOP principles and modular class architecture.
- Implemented request handling logic using queue-based scheduling to optimize elevator movement efficiency.
- Modeled real-world constraints such as direction prioritization and multi-floor request handling.

Path Finding Visualizer | Python, Pygame, Algorithms

- Built an interactive visualization tool for graph traversal algorithms including A*, Dijkstra, BFS, and DFS.
- Designed a grid-based simulation environment to demonstrate shortest path and search strategies.
- Improved understanding of algorithm efficiency through real-time visualization of node exploration.

CERTIFICATIONS & LANGUAGES

- **Certifications:**
 - Java (Basic) – HackerRank Certificate
 - Problem Solving (Basic & Intermediate) – HackerRank Certificate
 - AWS Certified
- **Languages:** English, Nepali, Maithili, Hindi.
